# Email Messages Direct From Your AS/400 with flashMAIL400™

FORMation mg's powerful flashMAIL400™ is a fast and efficient method to email messages direct from your AS/400 and attach spool files in various formats (*txt, *html, *pdf, *pcl, *rtf). Most noteably, flashMAIL400™ can attach spool files with merged form overlays and graphics if used with FORMation's flashFORM400 electronic form software.

A powerful feature of flashMAIL400™ is the ability to burst and batch e-mail (automatically and unattended) desired portions of a print run. These selected sections will e-mail merged forms and graphics with spool file data (which could be invoices, purchase orders, laser checks, etc...) to customers, prospects, employees, etc...

- attach spool files in **TEXT**, **HTML**, **PDF**, **PCL**, **RTF** and more formats

- attach Spool Files with Overlaid Graphics from FORMation's flashFORM400

- auto-burst your print jobs into selected portions to be e-mailed **AUTOMATICALLY**

- unattended, automated e-mailing of business documents - invoices, purchase orders...

- send AS/400 objects as file attachments

Emailing from your AS/400 messages, business documents and spool file reports in an easily readable format will save your company a tremendous amount of time and money eliminating cumbersome paper based labor and costs.

We would be happy to arrange a demonstration or evaluation of flashMAIL400™ anytime !

**System Requirements -**
AS/400 with OS/400, RISC v3r7m0 and higher.
